Summary

Analysis Engineer & Developer at Entail, combining client-facing analysis with engineering software development. Background in offshore installation analysis, hydrodynamics, Python automation, and offshore project engineering. M.Sc. in Marine Technology and Information Technology from NTNU, specializing in hydrodynamics and CFD. Focused on turning engineering methods into reliable, practical tools.

Experience

Analysis Engineer & Developer

Entail AS

Aug 2026 - Present

Oslo, Norway

- Combine client-facing analysis with hydrodynamics, visualization, and complex dynamic simulations.
- Develop reliable engineering software for analysis workflows and Entail's SaaS platform.

Installation Analysis Engineer

TechnipFMC

Aug 2024 - Jul 2026

Lysaker, Oslo

- Performed installation analysis of offshore structures and pipelines using OrcaFlex and Python.
- Developed and maintained an automatic pipelay analysis tool, improving modularity, simulation state tracking, validation, and engineering workflows.
- Served offshore as a project engineer on installation vessels, supporting subsea operations.
- Contributed to Utsira High iEPCI, Johan Sverdrup Phase 3, and LNG Mozambique projects.

Operations Technician

Kiona

May 2023 - Jul 2024

Trondheim, Norway

Analyzed sensor and alarm datasets in a 24/7 monitoring center across Norway and Sweden. Supported operational troubleshooting, service follow-up, and customer support.

Sales Associate

Kjell & Company

May 2022 - Jun 2023

Trondheim, Norway

Advised customers on electronics, assessed customer needs, and supported sales, customer service, and store management.

Conscription - Signal Battalion

Norwegian Armed Forces

Aug 2017 - Jul 2018

Bardufoss, Norway

Education

M.Sc. Marine Technology and Information Technology

Norwegian University of Science and Technology (NTNU)

Aug 2018 - Jun 2024

Trondheim, Norway

Thesis: Numerical Investigation of Uniform Flow Around Dual Step Cylinders.

Specialized in hydrodynamics and CFD. Studied wake topology, vortex shedding, and force response in laminar flow ($Re \sim 150$) around cylindrical structures relevant to offshore engineering.

Skills

Engineering: Installation analysis, hydrodynamics, CFD, offshore operations, data analysis

Tools: OrcaFlex, Power Automate, Linux

Programming: Python, Git, DevOps, SQL, LaTeX

Languages: Norwegian (native), English (fluent)
